LRT2022 First Announcement

Dear Low-Radioactivity Colleagues,

It's 2022 now, and almost three years have passed already since the last Low Radioactivity Techniques workshop in Jaca/Canfranc, Spain where we learned a lot about the latest advancements in ultra-low radioactivity detectors.

The LRT2022 will be held at South Dakota Mines in Rapid City, South Dakota from June 13-17 (Monday - Friday), 2022. We are planning for an in-person workshop, but we are prepared to pivot to virtual if needed. We are planning bus trips to visit the nearby Sanford Underground Research Facility, as well as Mount Rushmore and the Badlands during the week.

There are plenty of sights to see in and around the beautiful Black Hills for those who would like to extend the conference into a vacation.

You can find the workshop webpage at <https://indico.sanfordlab.org/e/LRT2022> with details (yet evolving) on accommodations etc. We plan to open the general registration from mid-February to late April, so stay tuned.

We are looking forward to hearing about all of the latest advancements in our field.

See you soon!

Cheers,
Richard Schnee
On behalf of the LOC
