

Neutrino theory overview

Tuesday, May 14, 2024 9:30 AM (30 minutes)

The observation of neutrino oscillations has shown that neutrinos are massive and hence that the Standard Model of particle physics has to be extended. In this talk I will discuss recent theory developments in neutrino oscillation and scattering physics, and in neutrino mass models which can be used to guide experimental explorations of the neutrino sector.

Primary author: Dr GEHRLEIN, Julia (Colorado State University)

Presenter: Dr GEHRLEIN, Julia (Colorado State University)

Session Classification: Plenary: Underground Science & Native American Heritage

Track Classification: Neutrino Oscillations
